**Elevate®
360° Drop Foot
Brace**

ELEVATE[®] FUNCTION

Ease of use and predictable function

Traditional AFOs are unwieldy, stiff, and difficult to apply. Elevate[®] is simple and functional. Set your desired lift-angle. Minimize muscle atrophy. Correct for eversion and inversion as desired.

ELEVATE[®] COMFORT

Elevate[®] replaces bulky in-the-shoe braces and the cheap non-customizable ankle braces. Careful material selection created an amazingly lightweight, yet sturdy and long-lasting brace.

ELEVATE[®] STYLE & VERSATILITY

Elevate[®] allows diversity in shoe style including sandals. Shoes without eyelets can be modified with ease using Crop-A-Dile eyelet punch, which can be purchased separately. The one-size Elevate can be customized to the user.

OUR STORY

FootScientific teamed with a leading foot and ankle surgeon whose patients complained about available drop foot braces. Elevate was developed to create a brace that was discreet and comfortable, while also stable and strong.

“ Thank you thank you FootScientific. I have had drop foot for several years with little support from my UK doctors. Since the brace has arrived and very fast delivery too, I have been able to walk with confidence and do the things I used to love doing. This brace is the most amazing breakthrough in Footdrop technology I wish I had found it years ago; I honestly mean this ... This device has changed my life for the better, it is discrete and easy to use and is totally brilliant. I wish I could promote this product to anyone with Foot Drop, it really does change your life. Once again FootScientific thank you thank you it's totally brilliant.

–Shelley Ahmet

“ I have a foot drop due to MS. I have worn a plastic AFO for about 6 years and have noticed atrophy in my calf muscle due to isolation from the AFO. My physical therapist told me about the FootScientific Elevate brace. I have been using it ever since. My calf muscle has built back up again, and I can actually feel my foot when I walk! My other foot was beginning to drop so now I wear on both ankles! I can't imagine where I'd be without them. I highly recommend the Footmind for anyone with drop foot!

–Kimberly Kramer

“ I injured my knee in an accident about 10 years ago., causing nerve damage which caused me to have a drop foot. I have tried a lot of different braces over the years they were uncomfortable, bulky, and hard to fit in my shoe. I finally found the right brace that really works, it is light weight and there is nothing inside your shoe! I would highly recommend the drop foot brace from FootScientific! I should mention that I am on my feet all day at work this brace makes it possible.
